

AI Engineer Internship: Full-Stack AI, LLM APIs & Applied Development

About Us

E2M is not your regular digital marketing firm. We're an equal opportunity provider, founded on strong business ethics and driven by more than 300 experienced professionals.

Our client base is made of digital agencies that need help with solving their bandwidth problems, cutting overheads, and increasing profitability. We need diligent professionals like you to help us help them. If you're someone who dreams big and has the gumption to make them come true, E2M has a place for you.

1. Program Overview

Title: AI Engineer Internship: Full-Stack AI, LLM APIs & Applied Development

Duration: 6 months

Location: On-Site (Ahmedabad)

Type: Paid Internship

Objective: Provide students with real-world experience building practical AI products, using LLM APIs, frontend, backend, databases, and automation logic, with mentorship and an opportunity to join our team full-time upon successful completion.

About the Internship: As an AI Engineer Intern, you'll work with our AI team to design and ship real working solutions: AI-powered micro apps, internal tools, dashboards, and client-facing AI products. This role is not about only using ChatGPT or writing prompts. You'll learn to build end-to-end solutions using AI APIs (OpenAI, Claude, Gemini), frontend and backend frameworks, databases, and AI-assisted development tools. This internship is best suited for candidates who want to become AI Engineers, not just AI users, solving real business problems for digital agencies.

2. Selection Criteria

Education Background:

- Currently pursuing a Bachelor's or Master's degree in Computer Science, Data Science, Artificial Intelligence, or related fields.
- Fundamental coursework in programming, software development, or applied AI (at least one foundational course completed or in progress).

Technical Skills:

- **Programming:** Basic working knowledge of Python.
- **Backend:** Basic understanding of APIs and backend development (REST APIs, server logic).
- **Frontend:** Basic knowledge of HTML, CSS, JavaScript, and frontend development.
- **Databases:** Understanding of databases and CRUD operations.
- **AI/LLM APIs:** Interest in integrating LLM APIs (OpenAI, Claude, Gemini, or similar) into applications.
- **AI Tooling:** Comfort using AI tools (ChatGPT, Claude, Cursor, Replit, Lovable, etc.) to build faster.

Soft Skills & Mindset:

- Ownership mindset, not just a task-completion mindset, with eagerness to build quickly.
- Clear communicator who can document work and ask the right questions when blocked.
- Collaboration: Ability to work in fast-moving teams and follow project guidelines.
- Problem-Solving: Ability to search, learn, debug, and implement independently.

Bonus Skills (Not Mandatory, but Nice to Have):

- Experience with FastAPI, Flask, or Node.js.
- Experience with React, Next.js, Streamlit, or similar frontend tools.
- Exposure to LangChain, LangGraph, RAG, embeddings, vector databases, or AI agents.
- Knowledge of Supabase, Firebase, PostgreSQL, or similar databases.
- Basic Git / GitHub knowledge and understanding of prompt engineering or structured AI outputs.
- Any prior project experience, even a university capstone, chatbot, dashboard, or personal AI app.

3. What You'll Work On

- Build AI-powered micro apps for internal teams and clients.
- Create custom dashboards and internal productivity tools.
- Develop AI-native applications using LLM APIs.
- Work on document automation, proposal generation, report generation, resume/JD matching, and meeting summary tools.
- Assist in building AI agents, RAG flows, vector search, and document-based AI assistants.

- Build simple full-stack AI applications across frontend, backend, APIs, databases, and AI models.
- Convert business requirements into working prototypes and MVPs quickly using modern AI tools.
- Test AI outputs, debug flows, and improve accuracy, formatting, and edge-case handling.

4. What You'll Gain

Real-World AI Product Experience:

- Real-world experience shipping AI products and applications end-to-end.
- Exposure to frontend, backend, database, and AI model layers used in production environments.
- Hands-on use of current AI tools and frameworks in live client projects.

Mentorship from Experts:

- Mentorship from senior AI consultants and engineers.
- Interns will be guided by our experienced AI team that regularly works with digital agencies.
- Regular check-ins, one-on-one sessions, and skill-building workshops.

Practical Exposure to Digital Agency Projects:

- See how AI is applied in digital marketing, content workflows, client tooling, analytics, and automation.
- Learn how AI solutions are scoped, built, and integrated for clients across diverse industries.
- Excellent for anyone aiming to become an AI Engineer within a marketing or consulting environment.

Career Development & Opportunities:

- Internship certificate plus priority consideration for full-time roles in the AI division.
- Outstanding interns may be offered a full-time position at the end of the internship.
- Networking opportunities with leaders in AI consulting, digital marketing, and tech.
- Workshops on resume building, interview preparation, and career growth within the tech sector.

5. Internship Structure & Responsibilities

Orientation & Training (Week 1 - 2):

- Overview of E2M Solutions' AI practice and product-building approach.

- Tool and framework introduction (Python, FastAPI, React / Next.js / Streamlit, Supabase, LLM APIs, AI coding tools).
- Best practices in project management, documentation, and shipping working prototypes.

Hands-On Projects (Weeks 3 to 23): Interns are assigned to real product builds under the guidance of a project lead or mentor. Tasks may include:

- Building full-stack AI micro apps, dashboards, and internal tools.
- Integrating LLM APIs into business applications.
- Writing backend logic and REST APIs for data processing and AI flows.
- Building RAG-based assistants and document automation tools.
- Testing, debugging, and creating documentation and user guides.

Progress Reviews (Ongoing):

- Weekly check-ins with mentors and monthly performance evaluations to ensure continuous learning and alignment with project goals.
- Regular feedback sessions on product builds and code reviews.

Final Presentation & Assessment (Last Week):

- Interns present the AI products and solutions they helped build.
- Showcase both technical implementation and business impact.
- Feedback and assessment sessions determine potential offers for full-time roles.
